# Press Release

**FOR IMMEDIATE RELEASE**

## **ADITUS Medical Announces Availability of LVIT, a unique device for concurrent Electroporation and Impedance Measurements**

**LUND SWEDEN, May 31, 1999** — **ADITUS Medical AB** today announced immediate availability of LVIT, Low Voltage Impedance Treatment, a unique device for concurrent Electroporation and Impedance Measurement. The data from the measurements are clearly presented on a computer screen and provides the operator with information regarding the progress and shows when to abort the process.

The LVIT also introduces bipolar pulses to the world of electroporation. This means that the user is no longer bound to using the traditional mono-polar square- or exponential pulses. The bipolar pulses have been found to generate excellent results mainly because of the lower voltage required is gentler to the cells and also minimizes the muscle contractions when used in vivo.

Founded in 1997, **ADITUS** Medical is a pioneer in the field of Intelligent Electroporation and a provider of flexible, easy-to-use and powerful Electroporation devices for research and laboratory use in vivo & in vitro. Based on its patented technology for Impedance Controlled Electroporation, ADITUS develops unique devices using the impedance measurement as a feedback for optimum setup and control of the Electroporation process.
